Vulnerability Scan Report

Report Date: **2026-03-24 16:15:46 UTC**

Test Period: **2026-03-24 – 2026-03-24**

Report ID: **TEST-VULN**

Classification: **CONFIDENTIAL**

Prepared By: **Accountable HQ**

FINDINGS SUMMARY

1 Vulnerabilities Identified

1 Medium

Table of Contents

1. Executive Summary
2. Scope & Methodology
3. Summary of Findings
4. Detailed Findings
   - 4.1 Missing HSTS Header (Medium)
5. Remediation Roadmap
6. Testing Tools & Techniques
7. Appendix: CVSS Severity Scale
8. Disclaimer & Confidentiality

1. Executive Summary

What This Means: 1 medium vulnerability identified.

Findings Overview

Severity	Count	Description
Critical	0	No critical vulnerabilities identified
High	0	No high-severity vulnerabilities identified
Medium	1	1 medium-severity finding recommended for remediation
Low	0	No low-severity vulnerabilities identified

2. Scope & Methodology

2.1 Scope

The following systems were authorized and included in this penetration test:

Asset	Type
https://example.com	Web Application

2.2 Methodology

Automated vulnerability scanning.

2.3 Testing Parameters

Parameter	Detail
Test Type	External Penetration Test + Web Application Assessment
Duration	30m 0s
Report ID	TEST-VULN

3. Summary of Findings

All findings sorted by severity with CVSS scores:

ID	Severity	Finding	CVSS	Asset
VULN-0001	Medium	**Missing HSTS Header**	5.3	https://example.com

4. Detailed Findings

4.1 Missing HSTS Header

ID	VULN-0001
Severity	Medium
CVSS Score	5.3
Affected Asset	https://example.com — /
CWE	CWE-523

> **What This Means:** The server does not set Strict-Transport-Security.

Technical Description

HTTP response headers lack HSTS.

Impact

Users may be vulnerable to downgrade attacks.

Remediation Steps

Add Strict-Transport-Security header.

5. Remediation Roadmap

What This Means: This is your to-do list, in priority order. Fix the most severe items first, then work through the rest. Once everything is fixed, contact us for your free re-test.

#	Finding	Action Required	Status
1	**VULN-0001: Missing HSTS Header**	Add Strict-Transport-Security header.	**Open**

Recommendations

Add HSTS header.

6. Testing Tools & Techniques

Phase	Tools	Purpose
Reconnaissance	Nmap, Subfinder, DNS enumeration	Service discovery, port scanning, attack surface mapping
Web App Testing	Caido, Nuclei, custom scripts	OWASP Top 10, authentication testing, session analysis
API Testing	Custom scripts, fuzzing tools	Endpoint discovery, input validation, authorization testing
Code Analysis	Semgrep, manual review	Static analysis, pattern matching, vulnerability identification
Exploitation	SQLmap, custom PoC scripts	Vulnerability validation, impact demonstration

7. Appendix: CVSS Severity Scale

Severity	CVSS	Definition	Remediation SLA
Critical	9.0–10.0	Immediate risk; full system compromise or large-scale data breach possible	Immediate (24–48 hrs)
High	7.0–8.9	Significant risk; unauthorized access to sensitive data or systems	14 days
Medium	4.0–6.9	Moderate risk; exploitation requires conditions but could expose data	30 days
Low	0.1–3.9	Minor risk; defense improvement recommended, not immediately exploitable	60 days
Info	0.0	Best practice recommendation with no direct exploitability	Next dev cycle

8. Disclaimer & Confidentiality

Confidentiality Notice

This report is CONFIDENTIAL and intended solely for the authorized recipients. Distribution to other parties requires written consent. Unauthorized distribution may compromise the security of the assessed systems.

Limitations

A penetration test is a point-in-time assessment and cannot guarantee discovery of all vulnerabilities. New vulnerabilities may emerge after testing due to software updates, configuration changes, or newly disclosed threats. Regular testing (at minimum annually) and continuous vulnerability management is recommended.

Liability

This assessment was performed in accordance with industry best practices. All testing was non-destructive and within authorized scope. Remediation decisions remain the sole responsibility of the client.
